

Mike Marynovich

QA Software Engineer

Hollywood, FL | (657)-477-0736 qa.marinovich@gmail.com | [linkedin.com/in/nikitamarinovichh](https://www.linkedin.com/in/nikitamarinovichh) | Green Card Holder

QA Software Engineer with 4+ years deep knowledge of SW development life cycle (SDLC) and expertise in successful product launches in high-pace development environments.

KEY ACHIEVEMENTS

- **Improved testing efficiency:** By using Data-Driven testing approach, reduced the impact of the “pesticide effect” in testing critical application features **by 80% within 2 team sprints**.
- **Reduced API Regression testing execution:** Automated API test suite, achieving **95% endpoint coverage** with Postman and JavaScript, reducing critical defects.
- **Accelerated the creation of comprehensive test scenarios** and the implementation of product requirements in testing by integrating the **Cucumber-Gherkin** approach into the test framework.
- **Improved CI pipeline efficiency:** Integrated API testing framework into CI pipeline, reducing build testing time **by 20%** and accelerating the delivery of the final release.

PROFESSIONAL EXPERIENCE

FJA-US, Boca Raton, FL

January 2026 – Present

US company partnering with some of the largest and most influential companies in the insurance industry

QA Engineer

- Introduced specific methodologies for initialization of variables to improve SW quality and avoid errors in the code implementation through embedded error detection.
- Own regression testing across 8+ concurrent insurance client releases: coverage planning, execution, and tracking fixes through to sign-off. Cycle time down to 1 day.
- Writing an automated regression suite in **Playwright + TypeScript** with Cucumber BDD. Tests run in CI/CD, and shrink the manual regression load.
- Cooperated across functional teams at various technical levels with **GitLab** and applied automated test suites in **CI/CD** pipeline with **Jenkins** to ensure timely releases of the new revisions in accordance with the build train schedule

CrossFi

May 2024 – December 2025

EVM-compatible Layer-1 blockchain · Crypto-to-fiat payments, staking, and synthetic assets · \$42.7M fully diluted valuation

QA Engineer

Was at the forefront of creating and maintaining a scalable Web3 and Mobile applications- Crypto Banking App, XFI Console, XFI Scan

- Automated API test suite, achieving **95%** endpoint coverage with **Postman CLI** and **JavaScript**, reducing critical defects, which allowed a **20% reduction** in the execution time of smoke and regression suites.
- Responsible for facilitating activities of the **QA testing teams** involved in development of quality assurance tasks for various project modules.
- Using **SQL (Oracle, PostgreSQL)** checked data deviations from the database with GUI and API testing results.
- Expanded QA department, **training** and **managing** a team of 5, which accelerated testing cycles and improved product quality.
- Brought **AI** into test authoring. It handles the repetitive parts; the testing judgment is still on people
- **Promoted QA testing approach to increase the speed and quality of project execution.**

Scrup LLC

August 2022– April 2024

FinTech and Healthcare solutions · 150+ projects, 9 startups launched

Software QA Tester

Tested and populated databases, as well as tested the Web and mobile applications on various devices and operating systems.

- 15 consecutive bug-free releases over 9 months
- Collaborate with developers, product managers, and other stakeholders to understand application requirements in the demanding **bank industry** and develop test plans.
- Reduced recurring post-release bugs by 50% through automated **REST API** test scripts in JavaScript
- Manual and API testing across fintech and healthcare features: auth, billing, transactions, patient portals, using **Postman**, **Charles Proxy**, and **DevTools**
- Analyze test results, identify defects, and work with the development team to resolve issues.
- **Onboarded 4 QA engineers** and set up documentation standards in **Qase** and **Confluence**. Made sure coverage held as the team grew.

EDUCATION

Associate's Degree Telecommunications Technology

TECHNICAL SKILLS

Waterfall and Agile-Scrum development; **CI/CD**: Jenkins; **API testing**: RESTAssured, Postman, Newman; **Databases**: Oracle, MySQL, Postgres; **Languages**: TypeScript, JavaScript, HTML(basic), CSS, XML, JSON; **Automation tools**: Playwright, Selenium; **Bug Tracking systems**: Jira, TestTrail; **Version control**: GitHub, GitLab; **IDE** VSC, Cursor ; **AI**: Claude, Perplexity, Agentic testing , Code

COMMUNITY LEADERSHIP

Advocates for quality-first approach in software development, ensuring early defect detection. Supports cross-functional international team in implementing test automation

EXECUTIVE STRENGTHS

Problem solving, CI/CD & DevOps mindset, Automation & Optimization
I can get things Done.
