SUMMARY

I'm a QA Engineer with 4+ years in fintech, blockchain, and healthcare. At CrossFi improved QA infrastructure, hit 95% API coverage, and cut critical defects by 40%. Now at FJA-US, leading testing for healthcare software that touches 115M+ members across 8+ concurrent client streams. Main stack: TypeScript + Playwright, Postman for APIs, and AI tooling for the repetitive parts.

WORK EXPERIENCE

QA Engineer | FJA-US | Jan 2026 - Present

Insurance technology · Configurable healthcare workflow software · 115M+ covered members

- Own regression testing across 8+ concurrent insurance client releases: coverage planning, execution, and tracking fixes through to sign-off. Cycle time down to 1 day.
- Identified and documented 20+ defects, accelerating resolution timelines by 25%.
- Writing an automated regression suite in **Playwright + TypeScript** with **Cucumber BDD**. Tests run in **CI/CD**, and the manual regression load keeps shrinking with each sprint.

QA Engineer | CrossFi | May 2024 - Dec 2025

EVM-compatible Layer-1 blockchain · Crypto-to-fiat payments, staking, and synthetic assets · \$42.7M fully diluted valuation

- Automated API test suite, achieving 95% endpoint coverage with **Postman** and **JavaScript**, reducing critical defects
- Expanded QA department, **training** and **managing** a team of 5, which accelerated testing cycles and improved product quality.
- Wrote test plans and 500+ test cases in **Jira** and **TestRail**, and led test strategy across payment flows, staking, and synthetic assets.
- Ran mobile testing across 10+ real iOS and Android devices using **BrowserStack** and **Appium**. Caught UI regressions and payment flow bugs that emulators would have missed.
- Brought **AI** tooling into test authoring. It handles the repetitive parts; the testing judgment is still mine.

Software QA Tester | Scrump LLC | Aug 2022 - Apr 2024

FinTech and Healthcare solutions · 150+ projects, 9 startups launched

- Manual and API testing across fintech and healthcare features: auth, billing, transactions, patient portals, using **Postman**, **Charles Proxy**, and **DevTools**.
- 15 consecutive bug-free releases over 9 months.
- Reduced recurring post-release bugs by 50% through automated **REST API** test scripts in JavaScript.
- 200+ test cases and checklists focused on edge cases and boundary conditions that happy-path testing misses.
- Onboarded 4 QA engineers and set up documentation standards in **Qase** and **Confluence**. Made sure coverage held as the team grew.

SKILLS

Test Automation: Playwright, Postman (scripting + collections), Appium, Allure

Programming & Scripting: JavaScript, TypeScript

CI/CD & Version Control: GitLab CI/CD, Git, GitHub

Test Management: TestRail, Jira, Confluence, ADO Test Plans, Qase

APIs & Performance Testing: REST, SOAP, JMeter, Postman

Databases: MySQL, MongoDB

Platforms & Tooling: BrowserStack, Charles Proxy, Android Studio, DevTools, Cursor, Claude, Figma

Methodologies: Agile, Scrum, Waterfall, SDLC/STLC

EDUCATION

Associate's Degree in Telecommunications Technology
